

Xmotion FlexiForms Transforms Paper Into Mobility

Melbourne, Australia – 20 September – Melbourne based technology company InterDev, has release Xmotion Flexiforms, a powerful solution to transform paper based forms and documents into a mobile data solution. FlexiForms allows users to create and manage forms and deploy them quickly and easily across a range of mobile devices. Xmotion FlexiForms has a broad horizontal appeal and suits applications such as Inspections, Surveys, Field Service Calls and Billing along with Asset Management.

There are obvious benefits for users of FlexiForms which include faster billing, better customer service, simpler retrieval of completed forms along with an auditable record of activity. In addition, companies can add the Location Services option to enable GPS tracking and to 'tag' jobs, assets or work performed with the relevant GPS location.

Flexiforms works by providing users the ability to create electronic forms that replicate the existing paper based form. This may be a complex multi-part form or a simple job billing form. The system allows forms to have a variety of 'responses' to each item or question such as multi-choice, drop down list, simple Yes/No and the ability to add photos and signatures as the form is being completed. Adding GPS allows GPS location of the staff, detailed tracking history as well as GPS locations for clients, assets or work performed.

Data is transmitted wirelessly to the devices allowing real-time deployment of new forms and changes along with real-time receipt of completed tasks and forms from the mobile worker. Flexiforms still operates even when there is no communications available and will detect and send information when an available and valid network is detected.

There are a choice of mobile devices supported by FlexiForms from PDA's to tablets and laptops providing the choice to pick the device suitable for the task. All types of communications are supported from local area network connection to 3G networks. For business operators this provides significant value by removing the delay in receiving paperwork and the subsequent delays in billing. Flexiforms can also export data to different business systems (such as MYOB) to allow immediate billing of tasks completed.

Xmotion FlexiForms is designed to scale from small to medium operators through to enterprise organisations. The pricing model is scaled accordingly, allowing operators of all sizes to access the technology and gain a rapid return on investment.
